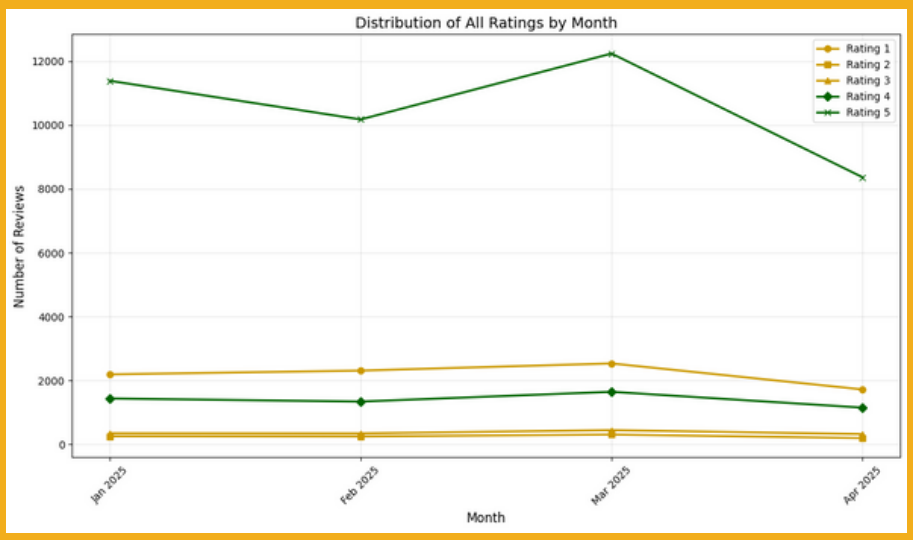
JAN-APRIL'25 GOOGLE PLAY STORE REVIEWS ANALYSIS BLINKIT

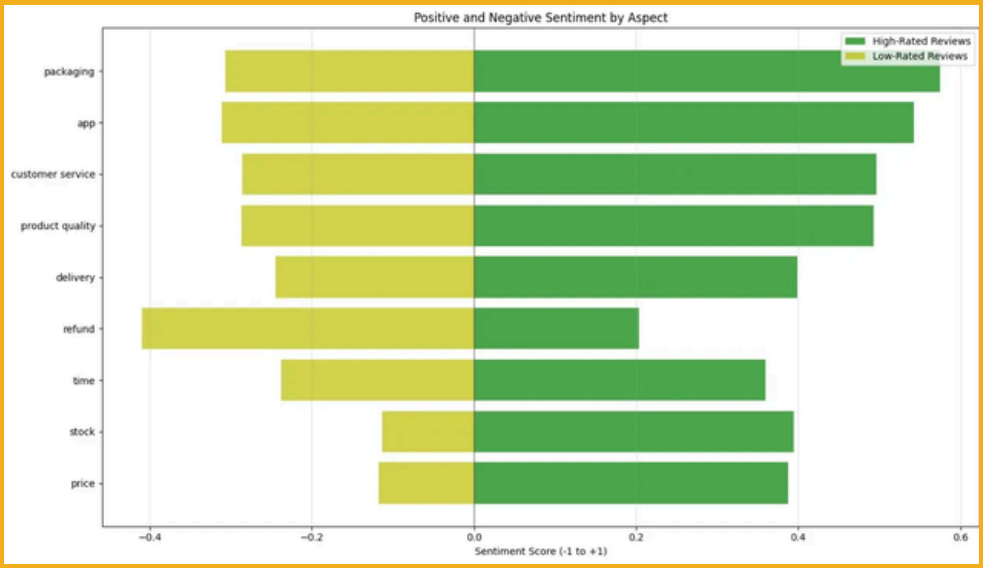
As of April 2025, **Blinkit's average rating is 4.5 stars** on Google Play Store. To identify key insights that could help improve this rating, I categorized reviews with fewer than 4 stars as "negative" and those with 4 or more as "positive." Although the majority of users express satisfaction with the company, I analyzed these two segments to understand the drivers of praise and criticism.



Ratings trend of last quarter

- **Strong Positive Sentiment**: 5-star ratings consistently dominate, showing high customer satisfaction
- **Significant April Decline:** 5-star reviews dropped 32% from the March peak (12,000+ to 8,300). **Should investigate what operational or service changes occurred between March and April** that might explain this downward trend.
- **Limited Negative Feedback**: 1-star and 2-star ratings remain minimal. (below 500 monthly)

User sentiment across topics



Strongest Positive Sentiment Areas

1. **Packaging** shows the *highest positive sentiment* (0.58) in high-rated reviews, making it Blinkit's standout strength. Customers appreciate the quality of the packaging and Blinkit should maintain these standards and use it as a differentiating factor from its competitors.
2. **App Experience** also receives strong positive sentiment (0.54) from satisfied customers, indicating that when the app works well, it's a significant brand differentiator.

Critical Pain Points

1. **Refund System** has the most negative sentiment (-0.4) in low-rated reviews, representing the most serious customer pain point. Further analysis of reviews will reveal the exact complaint areas.
2. **Customer Service and Product Quality** show significant negative sentiment in low-rated reviews (-0.28) but positive in high-rated ones, highlighting inconsistency in user experience.

Data: Used Python packages to collect the data from from Google Play Store and analyze it
Time period : 1st Jan 2025 - 21st April 2025 (59k reviews)

Response time of Blinkit's customer support

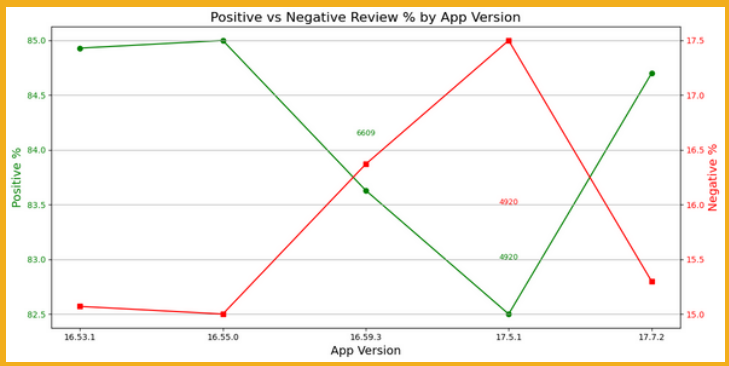
Insight - Blinkit is systematically **replying to 5-star ratings on a priority basis** and then addresses the 1-star ones.

Suggestion: To work on **reducing response time for 3 and 4-star ratings as these are the customers susceptible to getting poached** as they are on the fence about their satisfaction level and could be converted to loyal customers by timely addressing of issues.

Which app version had the most customer satisfaction?

Insight (fig 3) - Version 17.5.1 appears to be a critical inflection point in Blinkit's app development. It demonstrated the highest negative review percentage (17.5%), indicating significant customer dissatisfaction. However, the good news in the **most recent version (17.7.2) shows a strong recovery** indicating the company successfully addressed the issues from version 17.5.1.

Suggestion - To document the successful improvements made in version 17.7.2 to replicate and maintain this positive upward trend in future releases. **Push customers to update to the newest version by timely reminders.**



Competition Landscape

Insight: Zepto is the most mentioned competitor followed by Instamart. The average score associated with these reviews that mention a competitor is very low indicating strong user dissatisfaction and **reason for comparison/switching to a competitor.**

Sentiment analysis by competitor:

Insights from categorizing top comments competitor-wise to figure out the most common pain points. The upvote count is given in brackets.

- Customers report **duplicate order placement due to technical malfunctions** in the application interface. No returns were facilitated either (+796)
- Multiple instances of customers being **charged twice for orders that were canceled by Blinkit**. Customer support has offered promotional codes instead of monetary refunds and has been reported as non-responsive to follow-up inquiries (+176)
- Customers have expressed dissatisfaction with the **inability to receive replacements for damaged products,** incorrect sizes, or missing items despite providing photographic evidence. **There are indications of customer migration to competitor Zepto, which offers more flexible replacement and refund services** (+129)
- **Handling charges are high** compared to Amazon (+118)
- **Persistent failure of GPS location services** requiring customers to manually pin their delivery location for each transaction (+84)
- Customers report **no established process for dispute resolution** when promotional offers or discount coupons fail to apply correctly (+98)
